

Title

AIforActuaries: The IAA AI Task Force

Speaker/Company

Tim Bishop, Canadian Institute of Actuaries | Workstream Chair, IAA AI Task Force

Abstract

The presentation will begin by outlining the work of the Artificial Intelligence Task Force of the International Actuarial Association. Beginning with an overview of the thought leadership and reference materials produced by the AI Task Force in 2024, the presentation will continue by highlighting the ongoing initiatives of the Task Force in 2025.

The presentation will continue by introducing a new online community where actuaries around the world can "Share, Discuss and Collaborate" on topics related to AI. Sponsored by the IAA, this new resource is being produced by the AI Task Force. While the online community is focussed on AI in actuarial practice, participation is open all professionals who want to engage with peers interested in AI. The community site will provide valuable reference materials, but it will be more. It is about relationship building, knowledge exchange and sharing best practices.

Biography

Tim is a former reinsurance executive with 30 years of experience in financial reporting, actuarial valuation, reinsurance treaty administration, audit and consulting. He volunteers extensively with the Canadian Institute of Actuaries, the International Actuarial Association and the Society of Actuaries in the areas of predictive analytics and AI. Tim is currently the Chair of the Predictive Analytics Practice Committee of the CIA, a co-chair in the IAA Task Force on Artificial Intelligence and co-chair of the Advanced Topics in Predictive Analytics exam for the SOA.

Tim is a Fellow of the Society of Actuaries and the Canadian Institute of Actuaries.
